

SPOT GEN4

QUICK START GUIDE

1. Ensure your device is linked to your completed Peoplesafe Portal profile containing a contactable mobile phone number. Ask your Account Manager if you are unsure if this has been done.
2. Place the batteries in the device if they are not already inserted.
3. Switch the device on by pressing and holding the power button until the power indicator flashes. The indicators will all flash green in rotation to indicate the device has successfully performed a self-test. If they flash red, please contact Customer Support.
4. Make sure the device acquires a GPS signal by taking it to an area with an unobstructed view of the sky and holding it with the logo face up. The GPS indicator will flash green whilst obtaining a signal.
5. Complete a test call by pressing and holding the SOS alarm button until the SOS indicator flashes green. The GPS indicator will flash green and the Sending Message indicator will flash green to indicate your alarm has been sent. The ARC will then call the mobile listed on your user profile. When you answer this call, please say "Test Call".

For more information on how to use your device, please ask your Account Manager to send you the full technical user guide located in the Support section on the Peoplesafe Portal.
